Hello!
I would like to apply for the position of
Junior/Trainee Front-end Developer
at your company

My current results in programming are:

- knowledge of JavaScript;
- knowledge of HTML5;
- knowledge of CSS3.

At present I take a course on NodeJS, ReactJS and MongoDB at Oracle Academy.

Besides, I've tried to get the hang of TypeScript, Less and AngularJS on my own, but I haven't studied them deeply so far. To tell the truth, I've put my efforts rather on theory than on practice. So, I am not brilliant at them, but I understand the basic principles well enough.

My best advantages are:

- good English (Upper-Intermediate level, Certificate of the University of Cambridge);
- logical type of thinking and good analytical abilities (for example, I won a few interschool mathematics competitions in my teens).

The main goal of getting the job:

to obtain more knowledge through practice (Practice makes perfect☺), which is necessary to become Full Stack or Front-end/JS Engineer.

Additional information:

- 40 years old, have a husband and no children;
- have an academic degree of a Doctor of Philosophy in Economics (to be more accurate – in Statistics, which is near enough to mathematics);
- have been working as a Associate Professor at several Universities of Kharkiv for more than 15 years, so I know how to teach and how to study and I have professional skills in dealing with data;
- have got certificates about completion of courses:
 - ✓ Front-end technologies (HTML, CSS) – July-August 2017 (Oracle Academy);
 - ✓ JavaScript Development (ES5, ES2015, ES2016, OOP principles, DOM) – September-October 2017 (Oracle Academy);
 - ✓ Open JS JavaScript Core course by Dev-Pro.net and NURE IT Academy October-December 2017.

Have a nice day!
Olena.
